## **Appendix B: SD-WAN Use Cases (Informative)**

This section provides several SD-WAN use cases to assist in putting the normative sections of this document into context. These diagrams and text have been derived from the MEF white paper, MEF 3.0 SD-WAN Services [24].

## B.1 Hybrid WAN

Figure 7 – Use Case: Hybrid WAN

Figure 7 illustrates a use case for an SD-WAN Service operating over two Underlay Connectivity Services, an Internet UCS and an IP VPN UCS (e.g., implemented over MPLS) between the two sites. This hybrid UCS use case enables the Subscriber to use the two UCSs to achieve higher resiliency.

This is, perhaps, one of the most popular use cases because many enterprise Subscribers have both Internet and IP VPN UCSs to interconnect their sites, so the SD-WAN managed service enables them to take advantage of the benefits that SD-WAN provides over multiple UCSs.
