LSO Legato
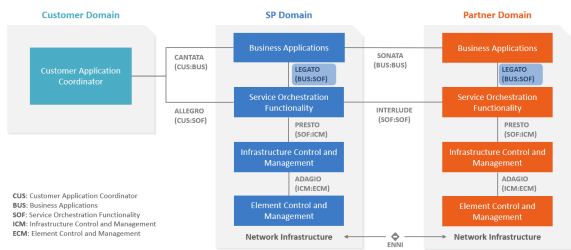

LSO Legato (BUS:SOF) belongs to the family of LSO Interface Reference Points (IRP) as defined by MEF 55. It defines the management reference point between the business applications and service orchestration functionality needed to allow management and operations interactions supporting LSO services. It uses an end-to-end service view across one or more Operator domains from the LSO orchestrator.

LSO Legato is used both in the Service Provider domain and in the Partner domain.
