

MEF 7.2 - Management Information Model

Superseded by [MEF 7.3](#)

Carrier Ethernet Management Information Model

MEF 7.2 is a specification document developed by the [Technical Committee](#) of the MEF to provide the **Carrier Ethernet Management Information Model**.

Status

SUPERSEDED

Abstract:

"This Specification defines a common set of managed object definitions that are consistent and readily integrated into a Carrier Ethernet Provider's operations environment. This common management model helps ensure that vendors provide management functionality and information in their OSSs, NMSs, EMSs, and NEs in a logically consistent fashion, and allows service providers to readily integrate such capabilities into their management environment."
