

# LSO Sonata SDK Contribution Opportunities

On this page you'll find the major features, tools and enhancements planned for future releases of LSO Sonata SDK.

## I. Example implementations

Postman collections consistent with latest API specs.

- Postman collections with example Sonata Management IRP calls for full E-Line service ordering process – *detailed scenarios to be defined*
- Postman collections with example geographicAddressManagement API calls – *examples for all cases*
- Postman collections with example geographicSiteManagement API calls – *examples for all cases*
- Postman collections with example productOfferingQualificationManagement API calls – *examples for all cases*
- Postman collections with example quoteNotification API calls – *examples for all cases*
- Postman collections with example quoteManagement API calls – *examples for all cases*
- Postman collections with example productOrderManagement API calls – *examples for all cases*
- Postman collections with example productOrderNotification API calls – *examples for all cases*
- Postman collections with example productInventoryManagement API calls – *examples for all cases*

Programming languages to be used could be suggested.

Example server implementation code for latest API specs and specific product (E-Line, UNI).

Example client implementation code for latest API specs and specific product (E-Line, UNI).

Example LSO Sonata implementation (sandbox) and tutorial description.

## II. Tools

Tooling to take the LSO Sonata payload and make it easier in the Swagger toolchain.

A mapping solution between LSO Sonata Ordering API and ATIS ASR.
